10. Ten couples took part in a dance competition.

The couples were given a score in each round.

The scores in the first round were

16   27   12   18   26   21   27   22   18   17

(a) Calculate the median and semi-interquartile range of these scores.　　3

(b) In the second round, the median was 26 and the semi-interquartile range was 2·5.

Make two valid comparisons between the scores in the first and second rounds.　　2
